BALANCED FORMULAS  
KEY NUTRIENTS FOR GROWTH

Quality  
infant milk  
powder  
to take care of  
your  
little bears

According to the recommendations of the World Health Organization breastfeeding is a superior form of feeding for infants and young children, compared to substitutes.

## A range to help the development of each baby during its first three years

Breast milk remains the primary source for the nutritional needs that come with this growth. However not all mothers are able or wish to breastfeed their children. FULEMI formula milk range is specially adapted to meet the growing infant and young children's needs. FULEMI is manufactured under meticulously controlled conditions and meets all the CODEX regulations to infant formulas.

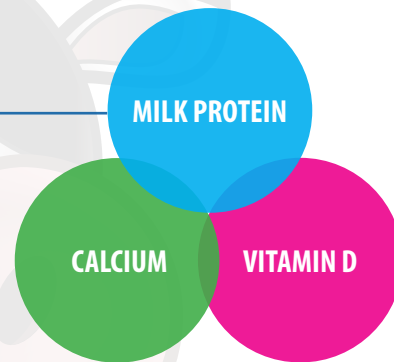

### Special formula for toddlers \*

FULEMI GROWING UP is a formula especially designed to complement the baby's varied diet, between 1 and 3 years of age. FULEMI GROWING UP contains supplements that help promoting better nutrition and a healthier immune system.

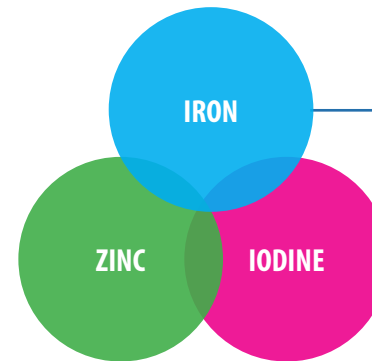

### Building strong bones \*

FULEMI milk formulas help babies to develop a good bone structure. **Milk proteins** are used to build bones and **calcium**, in synergy with **vitamin D**, ensures bones are strong.

### Minerals for the immune system \*

**Iron, zinc** and **iodine** are essential building blocks of the immune system. The content of these vital minerals in FULEMI protect the infant from deficiencies and contribute to its optimal development.

### Helping healthy development \*

FULEMI 1, 2 and 3 are added with natural prebiotics galacto-oligosaccharides (GOS). Fortification with prebiotics improves infant stool characteristics and increases the amount of the beneficial bifidobacteria and lactobacilli in the infant's gut.

### Fatty acids for the nervous system \*

FULEMI milk powders contain linoleic and alpha-linoleic acids, which assist in an optimal development of the infant nervous system. The rate of these two essential fatty acids in FULEMI formulas is comparable to what's found in breast milk.

*Comparative yields of Omega 3 and Omega 6 in breast milk and FULEMI milk powders*

Mother's milk	5 to 15
FULEMI 1	10
FULEMI 2	10
FULEMI 3	10
