

Up To All Challenges: The TC Palgrip® From Craemer

Herzebrock-Clarholz, Germany. Hygiene is the highest priority in food production and processing – a requirement that is perfectly ensured by the completely closed plastic pallets of Craemer's TC series. For absolutely reliable load securing, all models within the TC range are now optionally available with a full-surface Palgrip® anti-slip deck. Equipped with Palgrip®, the TC pallet is up to meet all the challenges in the food industry.

The completely closed, fully anti-slip coated top deck and the smooth lower deck of the TC Palgrip® boast excellent cleaning properties. In addition, the cavity- and rib-free construction of the robust and durable hygiene pallet offers reliable protection against contamination or water ingress. The unique Palgrip® anti-slip coating, like the pallet itself, is made of high-quality polyethylene and is firmly bound to the pallet in a one-step production process.

The structurally stable TC Palgrip® pallet withstands temperatures from -30 to +40 degrees Celsius (briefly also up to +90 degrees Celsius) and is equally suited for use on roller conveyors, chain conveyors and in automated high-rack warehouses. The load-bearing capacity on the shelf can be increased to up to 2,000 kilograms, using integrated, corrosion-protected metal reinforcement profiles, which are optionally available. Chamfered edges on both sides of the runners enable optimal use with fork-lift trucks. Thanks to the unique, full-surface Palgrip® anti-slip top deck, the TC Palgrip® offers total slip resistance, securing the load even in damp conditions or inclined positions. Craemer is the only manufacturer in the world that offers such a solution for the all-round reliable flow of logistics processes. On request, the hygiene pallet can also be equipped with RFID transponder.

The TC Palgrip® is available in euro dimensions of 1,000 x 800 millimetres with three runners (TC1) as well as in industrial dimensions of 1,000 x 1,200 millimetres with three (TC3) or five runners (TC3-5). The height of the pallets is 160 millimetres.

The Germany-based Craemer Group is an international family-run company specialising in the core businesses of metal forming, plastics processing and tool making. The headquarters is Craemer GmbH, founded in 1912 in Herzebrock-Clarholz. Craemer Group has three additional production sites in Europe and a global network of its own sales offices and partners. In 2020, Craemer employed around 1,000 staff and achieved a total operating performance of around 260 million Euros. www.craemer.com
