

## Hamaton Launch New Aftermarket Valve for Tesla BLE Sensor

Hamaton, a leading manufacturer of TPMS products, is launching a brand-new aftermarket replacement valve for the Sysgration BLE (Bluetooth Low Energy) sensor, which has been produced specifically for the Tesla Model 3 and Tesla Model Y.

Hamaton identified demand for Tesla aftermarket replacement parts is increasing as the popularity of its cars continues to soar. According to JATO Dynamics, Tesla Model 3 registrations grew by 64% (year-on-year) to 141,429 in 2021, making it the 17th most-registered vehicle in Europe - surpassing the likes of Mercedes A-Class and BMW Series 3.

As more Tesla models hit the road, garages will inevitably experience a rise in the amount passing through their workshops. This valve presents an opportunity for garages to earn additional income from TPMS servicing. OE manufacturers recommended replacing the TPMS valve each time the tyre bead is broken, e.g., when the tyre is repaired or replaced.

Furthermore, the valve is available in a choice of two colours – complementing black and silver alloy wheels – both of which come in boxes of 10.

Hamaton encourages garages and distributors alike to get prepared to meet demand. Contact the Hamaton team via [info@hamaton-tpms.com](mailto:info@hamaton-tpms.com) to pre-order.
