

Babyauto is a company solely dedicated to creating innovative child restraint systems that make car travel safe for babies & kids.

Unlike another child products brands, Babyauto concentrates exclusively on young passengers' car safety. This commitment to specialization allows the company to create unique and highly advanced child car seats with the best value for money. By focusing strictly on developing cutting-edge car seats and accessories designed to keep infants and children secure during vehicle trips, Babyauto ensures every one of its products promotes safety above all else at a price adjusted to all types of family economies.

A good example are new iSize multigroup car seats that makes parent's lives easier and children safer on car journeys. Providing the ultimate comfort to both parents and children alike, the new 360 degree rotatable iSize car seats can be used either rearward or forward facing with easy entry and exit for the child. They come with various recline positions in both directions for comfortable sleeping, including ergonomically flat positions for newborns, thanks to the newborn insert. Additionally, the deeply padded side wings provide optimum security along the entire seat, similar to a soft cocoon.

Crash tests are essential in determining the effectiveness of Babyauto child restraint systems. Since 2011 the Impact Laboratory (University of Zaragoza, Motorland) has been the reference crash test laboratory for Babyauto. All tests, both R&D and conformity of production (COP), are carried out there. Tests are also carried out in other European laboratories (TNO, ADAC...) always seeking excellence in the manufacture of child restraint systems.
