Metal recycles forever. Manufacturing of food cans.

In a world striving for sustainability, the spotlight is on steel cans as the superior packaging. Why not consider producing food cans with a turnkey can-making system from Soudronic?

Steel cans are 100% recyclable, promoting a circular economy that minimizes environmental impact. They can be recycled indefinitely without compromising their quality. Providing an excellent barrier against light, oxygen, and moisture, steel cans preserve the freshness of food.

Your manufacturer of turnkey can-making systems

Soudronic provides a complete range of machines and components for the can-making industry, focusing on three-piece and two-piece can production lines and end-making systems. The machines operate at speeds of up to 1,200 cans per minute. In addition to cans, other shapes such as pails, drums, and irregularly shaped metal containers can be produced.

We support our customers in the conception, design and commissioning of the lines and offer a comprehensive after-sales service through our worldwide service network.

Discover the potential of steel cans and how they are shaping the future of sustainable food packaging. Be part of the change and let us create a world where convenience meets responsibility.

Visit us in hall 5.1, at booth no. B-40.

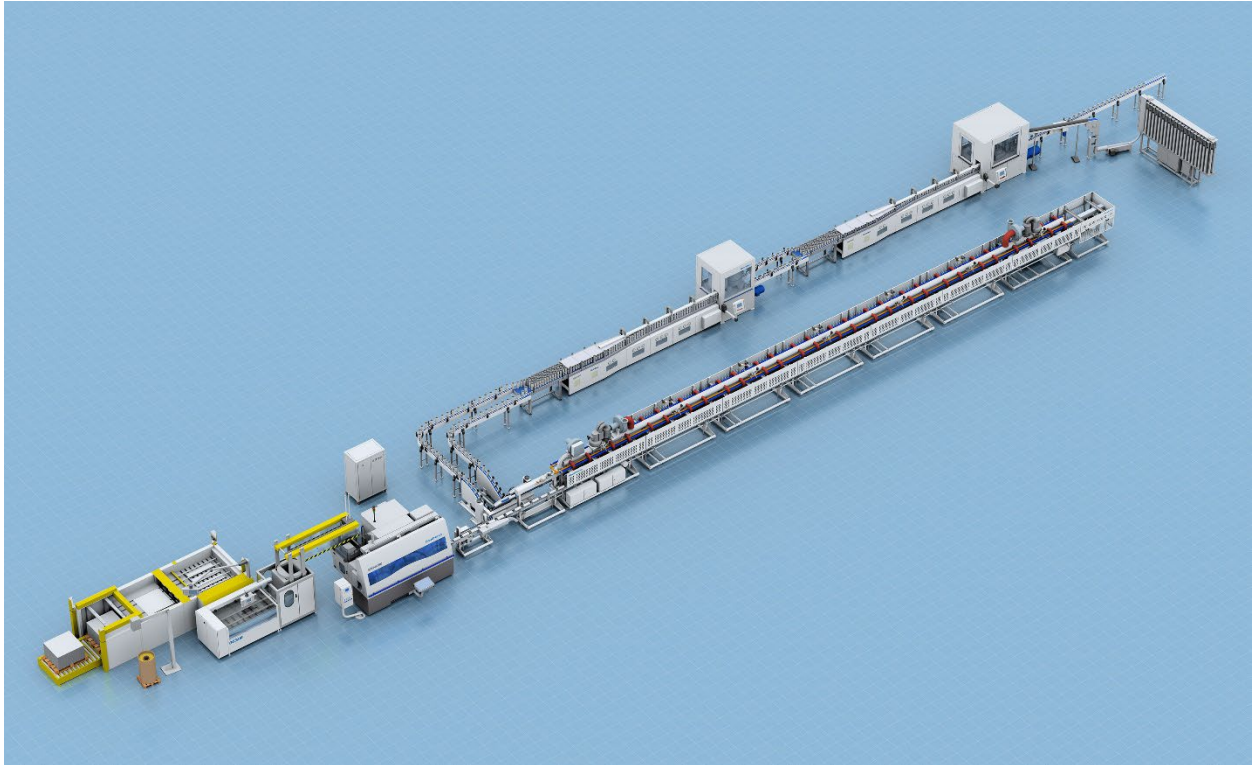

Soudronic Group

Founded in 1953, Soudronic's headquarters is in Switzerland. Today, the company employs a staff of around 600 people in its development and production facilities throughout the world. The sales and service network covers more than 120 countries, reflecting a large and globally spread customer base. Highest engineering standards, long-lasting quality, and maximum system efficiency are the basis of our outstanding reputation around the world.

With more than 15,000 machines and system components installed, Soudronic's production systems can be found virtually all over the world.

The Soudronic Group includes Sabatier in France, which specializes in general lines, and Ocsam Cepak in Italy, which specializes in slitters and transfer systems. In 2020, innovation driver Can Man AG from Switzerland joined the group, as did Frei AG, a Swiss manufacturer of coating and curing systems.
