

## Carefree production with the right raw material handling

When (re)designing the raw material handling sub-process, the entire production process must be considered so that everything runs smoothly in day-to-day business.

- ⇒ Beyond the raw material area.
- ⇒ Right down to packaging.

### **An isolated view of raw material handling quickly leads to problems in the entire production.**

Therefore, when (re)designing processes in the raw material area, the entire production process must be considered.

This rules out interface and performance problems and creates smooth processes.

If processes downstream of raw material handling are not carefully planned, problems will arise later in day-to-day operations.

### **To ensure ideal handling of raw materials, certain characteristics need to be considered and dealt with.**

It is a good thing, therefore, that we at FactoryXperts have Xperts who not only specialize in raw materials, but also know and understand the entire process of food productions.

The FactoryXperts service portfolio in raw material handling includes:

- Raw material analyses / A/B/C analyses ⇒ important for the storage period (optimal purchasing conditions)
- Process-based product assignment for bulk, main, medium, small components
- Storage conditions / storage optimization / warehouse management
- Recipe analysis for process optimization
- Process proposals for material flow ⇒ prevention of bottlenecks
- Creation of process flow charts
- Performance calculations to provide raw material in the right quantity and time
- Stocktaking

## A neutral view offers clear advantages and the best technical solution

When looking for the best technological solution for your individual needs, FactoryXperts takes a neutral look at the different skills, strengths and innovations of various machine suppliers and suggests the best solution for you based on the functional and technical requirements.

FactoryXperts has in-house expertise in raw material handling for both dry materials and liquids. Technical solutions for our customers are selected on a user-oriented basis – from the point of view of the product range and production processes – and from a neutral perspective.

Effect through FactoryXperts	Your added value
The technical solution meets the process requirements	Process reliability
Management of tendering process by FXP	<ul style="list-style-type: none"> <li>• Technical security</li> <li>• Comparability</li> <li>• Cost transparency</li> <li>• Negotiating power</li> </ul>
Comparability of different suppliers	<ul style="list-style-type: none"> <li>• Transparency</li> <li>• Complexity reduction</li> </ul>
Safe integration of the automation solution	Process reliability
Targeted investment, contractual support	Financial security
A functioning team right from the start	<ul style="list-style-type: none"> <li>• Security</li> <li>• Risk minimization</li> </ul>
Identification of energy saving potentials	Sustainability

We are looking forward to hearing from you. Please visit us in [hall 06.1 | booth A060](#).
