

Organization with system

The L-BOXX system combines intelligent design, robustness, and versatility to fulfil the requirements of professional users.

A lot of tradespeople these days, work mainly mobile. This means that they spend most of their worktime outside of the workshop and on average they visit several building sites or customers every day and spend a significant portion of their workday in the vehicle.

Therefore, tools and small components must be transported from the vehicle to the building site in the mornings and back to the workshop in the evening. In the course of this, a lot of time is lost in loading and unloading, as well as looking for the correct parts or tools. It is not unusual that several trips must be made before everything necessary is in the area of operation. This is, at the end of the day, time that is missing on the construction site or for customers.

And this is exactly where the **L-BOXX** system comes into its own. The **L-BOXX** was developed as a professional case system and is the intelligent solution for transporting and storing of tools, accessories and consumable materials in skilled crafts and industry. From the very beginning, the aim was to provide professional users with high-quality and intelligent solutions, which would optimize work processes and

thereby enable quicker and more efficient working.

One important factor here is the clever and patented click system, and another is the well-thought-out modular design. In combination with its versatile accessories program, the **L-BOXX** system offers almost unlimited possibilities, meaning it can be adjusted to meet the individual requirements of the user. The various sizes and configurations enable an optimal use of the space available and guarantee organization with an overview. As many **BOXX**es as you like can be clicked-in to each other intuitively and without any effort, which means they can be transported while connected, thereby saving you time.

An ergonomically shaped handle allows comfortable transport even when the boxes are fully loaded. An outstanding characteristic of the **L-BOXX** system is the resilience to extreme conditions. The **BOXX**es are impact resistant and dustproof, which guarantees reliable storage and safe transport, even under demanding conditions.

In addition to the well-known Insetboxes for small parts and consumable materials, there are also economically priced inlays available for sub-division of the BOXX interior and to ensure everything is transported safely. Transport solutions have been developed especially for the L-BOXX like e.g. the clickable roller base plate, which not only facilitates the transport of material to the building site, but also transforms the L-BOXX into a mobile workbench or a worktop, depending on requirements.

Full integration into the TÜV-certified van racking systems from renowned manufacturers like e.g. the market leader Sortimo, mean the L-BOXX system is not only uniquely secure but also securely unique. Complex load securing in the tradesman's station wagon is avoided thereby at each customer visit or operation on a building site; and taking the entire working week into consideration this is an immense benefit, not to mention a noteworthy safety aspect for the vehicle's passengers as well as the well-sorted and orderly stowed contents.

When one looks at a craftsman's complete workday, a mobility system with permanent added value regarding ergonomics, efficiency and safety arises from such an unimposing case.

When the customer so desires, the manufacturer will individualize the complete L-BOXX system, beginning with the corporate visual identity and on to customer specific design of thermoformed parts, EPP inserts, foams and tool pouches.

The modular and robust L-BOXX system is the ideal accompaniment for the professional tradesman in all branches. It combines intelligent design, robustness, and versatility to fulfil the requirements of tradespeople, technicians, and professional users. An innovative solution which increases efficiency, organization, and mobility in the daily workload in skilled crafts and trades, to a new level. Over 350 system partners from right across the spectrum of the construction trade are meanwhile ensuring that no tradesman must miss out on the L-BOXX mobility system. The cross-brand system approach is designed for maximum exploitation by the trades professionals. Everything will be perfectly sorted, ordered, and protected by packaging in the L-BOXX system, clicked together and transported one-handed in a time-saving manner to the area of operation.

Further information can be found on the website [L-BOXX.com](https://www.L-BOXX.com) and can be requested from the manufacturer by email under info@L-BOXX.de as well as by telephone under 08291/850-2300.

About:

BS Systems GmbH & Co. KG from Zusmarshausen is a joint company of Robert Bosch GmbH and Sortimo International GmbH. The specialist for mobility and packaging systems was founded in 2012 and has successively built up its product portfolio around the L-BOXX family ever since. In the meantime, about 50 employees are working on continuous further development and sales of the intelligent and innovative mobility systems L-BOXX and ProClick. BS Systems can meanwhile boast over 350 well-known OEM producers as their customers, who utilize the packaging and transport solutions as partner companies. Up to now, over 40 million BOXXes sold means that the company can self-confidently describe itself as the market leader in the segment of high-quality system cases and can count the Who's Who of the tool industry among its customers.
