

VISIT JCB TOOLS AT THE 2024 COLOGNE INTERNATIONAL HARDWARE SHOW

JCB Tools - an official partner of construction equipment manufacturer JCB – will be exhibiting at Eisenwarenmesse Cologne this year.

The experienced engineering team at JCB Tools has worked closely with the JCB Industrial Design team at the company's world headquarters in Staffordshire to produce a comprehensive and ever-expanding range of product categories.

A team of knowledgeable representatives from Genpower Ltd will be on hand at Stand D-001 in Hall 10.2 to talk you through our extensive selection of products, as well as detailing the cutting edge technology which lies at the heart of our range.

Our product specialists will be demonstrating the brand new JCB Site Storage System along with unveiling three of our new JCB Air Compressors, while also offering a world-first glimpse of our JCB Cement Mixer.

JCB Site System

The JCB Site Storage System is a stackable tool storage ecosystem that is engineered to be seamlessly transported between environments and workplaces thanks to its integrated heavy-duty cart, which is fitted with two large 9" All-terrain wheels.

Its connected system design provides versatility and compatibility, which allows the user to transport and organise a high volume of power tools and accessories whilst keeping them protected.

The complete JCB Site System boasts a high loading capacity of 113kg and offers user-friendly front access with multi-layered storage.

For added convenience, the JCB Site System includes wall mounted bracket accessories as standard.

Cement Mixers

Our new selection of products includes the exciting arrival of two electric powered cement mixers, as well as two petrol-driven models joining our rapidly-growing range.

Built for the trade professional, all four of the JCB Tools cement mixers are fitted with a heavy-duty 134 litre seam welded drum and feature a robotically welded one-piece chassis design, which offers a three position adjustment mechanism.

A high-torque 550W electric motor powers the 230V and 110V JCB electric cement mixers. By virtue of its lower voltage, the 110V model is compatible for use on construction sites.

Our petrol models are powered by the trusted Honda GX120 4-stroke engine along with the market leading JCB 135P engine.

Air Compressors

A trio of our newly launched JCB air compressors, which includes the 6, 24 and 50 litre variants, will also be showcased on our stand.

All three of the JCB air compressors displayed at the Cologne Hardware Show provide 8 bar (116psi) of working pressure. The 24 and 50 litre models are capable of producing an impressive air displacement rating of 257L/min.

Our 6 litre model is an oil-free air compressor, which produces cleaner and drier air, and is also easier to maintain - significantly reducing its running cost in the process.

For further information on our wide range of tools and accessories, visit JCB Tools at Stand D-001 in Hall 10.2, or take a look at our brochure, which can be found on <https://jcb-tools.com>
