

## **Jensen Dental presents at IDS 2025: 850 MiYO – The unique Liquid Ceramic System for Lithium Disilicate Restorations before Crystallization**

Jensen will present the innovative 850 MiYO at IDS 2025, a state-of-the-art Liquid Ceramic System specifically developed for the characterization of lithium disilicate restorations before the crystallization firing. This innovative system simplifies the workflow and takes the aesthetics of restorations to a whole new level.

### **Faster, highly aesthetic results**

850 MiYO allows for quicker production, as the additional characterization firing is no longer required. Users can work more efficiently while still relying on the proven quality and natural appearance of the results. Another advantage of 850 MiYO is its higher firing stability, which also allows it to be used with high-fusing layering ceramics in hybrid technology.

### **Unique MiYO light dynamics for natural results**

Thanks to the innovative MiYO light dynamics, 850 MiYO does not create shadows as with traditional staining colors. The diffuse scattering of light ensures a natural aesthetic and depth effect. The high color stability ensures that colors do not fade during the firing process, and the results are always reproducible—without surprises.

### **Product features at a glance**

- **Easy application:** 850 MiYO can be easily applied, even wet-on-wet, without running. After crystallization firing, it shines without the need for an additional gloss firing.
- **Natural aesthetics:** 850 MiYO replicates the translucency and vitality of natural teeth. The restorations acquire a surface shine that closely resembles that of natural tooth enamel.
- **Safe & predictable:** The result after firing matches the design before firing. The colors remain stable without any graying, and all VITA® Classic shades can be reproduced.

"With 850 MiYO, we are setting a new standard in dental technology. The combination of innovative technology, ease of use, and excellent aesthetics enables users to achieve outstanding results quickly and reliably," explains Jo Weber, CEO of Jensen GmbH. The launch of 850 MiYO is another step in our continuous efforts to provide dental technicians worldwide with the best solutions.

### **About Jensen Dental**

Jensen Dental is a leading provider of innovative dental ceramic systems and solutions for dental technicians worldwide. With over 30 years of experience in the industry, Jensen Dental stands for quality, innovation, and progress. Our ceramic systems, such as MiYO and InSync, set new standards in the aesthetics and functionality of dental restorations, enabling dental technicians around the world to achieve exceptional results.
