

Harn Rolls Out the Alunan T7: The World's First 7.2mm Double-Wall Drawer Profile

Cologne, Germany — 20 May 2024 – Harn introduces Alunan T7, a new development in drawer engineering set to make its global debut at Interzum Cologne 2025. Featuring the world's first 7.2mm double-wall profile and made from 99% recyclable steel, Alunan T7 is designed to deliver functional simplicity, long-term sustainability, and seamless integration into modern furniture systems. In recognition of its design and engineering quality, Alunan T7 has been awarded the interzum Award – High Product Quality.

Built on the RITMA T Platform, Alunan T7 ensures smooth, quiet operation with an intuitive installation system that allows for straightforward assembly and easy adjustments. With just three carefully selected heights—88mm, 120mm, and 192mm—T7 simplifies decision-making for designers and users alike, offering clarity and ease without compromising performance.

The RITMA T platform, the drawer runner powering Alunan T7, is engineered for superior performance and flexibility. This same platform is also compatible with RITMA Cube and Alunan T drawer profiles, allowing designers and manufacturers to create endless possibilities within a unified system. Whether for sleek, modern kitchens or high-performance storage solutions, this adaptability ensures seamless integration across multiple designs—all while maintaining the highest standards of durability and smooth operation.

“At Harn, we believe that great design is not only about aesthetics but also about performance, sustainability, and user experience. The Alunan T7 embodies this philosophy, offering a solution that is as refined as it is practical,” said Harn product manager Vivian Lam.

Experience Alunan T7 at Interzum Cologne 2025

Visitors to Interzum Cologne 2025 are invited to experience the RITMA T Platform along with the world's first 7.2mm double-wall drawer profile innovation in the Alunan T7 firsthand at Harn's booth. In recognition of its outstanding engineering and design, Harn's Alunan T7 has been honoured with the interzum Award—High Product Quality.

With hands-on demonstrations, industry professionals can explore the effortless glide, modular adaptability, and space-saving design that define this latest innovation. With changing furniture demands, Harn focuses on quiet progress—developing drawer systems that are practical, reliable, and easy to use.

See how Harn is shaping practical, refined drawer systems at Interzum Cologne 2025 — Hall 10.2, Stand H039.

About Harn:

Harn is a Malaysian hardware manufacturer specialising in high-performance drawer runner systems since 1994. As a family-owned brand, we're dedicated to innovation, quality, and sustainability. We build drawers that hold household items together as well as the integrated experience of everyday living.

Designed for excellence, built to last.
