

TotsBots Makes Sustainability Easy: Modern Reusable Nappies Without the Myths

- Each child produces up to 6,000 disposable nappies – most ending up in incinerators.
- TotsBots offers easy-to-use, reusable nappies made in the EU from soft, sustainable materials.
- Modern cloth nappies support earlier potty training and reduce environmental impact without compromise.

Each baby using disposable nappies generates **up to 6,000 single-use nappies** during their nappy-wearing years — most of which end up in **incinerators**, contributing to carbon emissions and unnecessary waste. But what if choosing sustainability could be just as easy as using a disposable?

That's exactly what **TotsBots** offers: **modern, reusable nappies** that combine innovation, simplicity, and sustainability. Forget outdated myths of boiling, folding, and pinning – today's cloth nappies are a world apart. TotsBots makes it easy for parents to make a better choice for their baby and the planet.

Proudly made in the **EU**, TotsBots nappies are crafted from **cutting-edge, sustainable materials like super-soft and highly absorbent bamboo terry**. This breathable fabric is gentle on delicate baby skin and helps maintain comfort throughout the day. The nappies are built to last, with **top-quality Velcro fastenings** that stay strong even after **hundreds of washes**.

Ease of use is at the heart of the TotsBots design. These nappies are as simple to change as a disposable, and they work just as well **at home, on the go, or in daycare** settings. Plus, because babies in cloth nappies can feel wetness, they often **potty train earlier – sometimes up to a year sooner** than their disposable-wearing peers.

With a variety of colourful prints and playful designs, TotsBots adds personality to every nappy change – and makes sustainable parenting something to feel good about.

TotsBots reusable nappies: made to be loved, washed, and reused – again and again.
