Reliable Metal Hardware Solutions for Architectural and Industrial Applications

Our metal hardware product range is engineered to deliver **strength, durability, and consistent performance** across a wide variety of architectural and industrial applications. Our products are manufactured to meet the functional and aesthetic requirements of global markets. The collection includes **brackets, fittings, connectors, fasteners, and functional hardware components**, developed to support secure installation, smooth operation, and long-term reliability.

To withstand demanding environments, our metal hardware products are available with **corrosion-resistant surface treatments**, including zinc plating, powder coating, anodizing, and custom finishes. These options enhance durability while allowing flexibility in appearance and application.

With a strong focus on **practical engineering, customization capability, and production efficiency**, we support OEM and project-based requirements, from standard items to fully customized solutions. Our metal hardware products provide dependable building blocks for manufacturers, contractors, and designers seeking high-quality components for durable, safe, and well-finished end products.
