

AVUS Racing presents the AC-V01 at The Tire Cologne

At The Tire Cologne, AVUS Racing introduces the AC-V01 – a model developed for the pickup, van and commercial vehicle segments, with a focus on robustness, load capacity and real-world use in the aftermarket.

Designed with a load capacity of up to 1,350 kg, the AC-V01 is built to meet the demands of vehicles requiring structural reliability and technical consistency, both in professional use and leisure applications. The model has also been specifically conceived for the motorhome segment, an area of growing relevance for the European market and particularly for Germany.

Key applications at this stage include models such as the Toyota Hilux, Toyota Land Cruiser, Isuzu D-Max, Nissan Navara, Ford Ranger, Mitsubishi L200 and Mercedes X-Class, alongside a broad family of vans and light commercial vehicles including the Mercedes Sprinter, Mercedes Vito / V-Class, Volkswagen T5, T6 and T6.1, Volkswagen Crafter, MAN TGE, Ford Transit Custom, Renault Trafic, Opel Vivaro, Fiat Ducato, Peugeot Boxer and Renault Master. This selection represents an initial reference and will be updated in line with further technical and commercial developments.

With the AC-V01, AVUS Racing offers a solution for a segment where load capacity, vehicle credibility and consistent application are decisive.
