PRESS RELEASE IDS 2021

Extension of the integrated Ceramill CAD/CAM workflow - digital solutions lead the way into the dental practice

Ceramill Direct Restoration Solution (DRS) from Amann Girschbach for interdisciplinary future-oriented collaboration and speedy production

With its Ceramill Direct Restoration Solution (DRS), Amann Girschbach is extending its integrated digital workflow to the dentist, thus closing the existing communication gap between the dental practice and the laboratory. In this process, both partners contribute their core competencies to provide patients with definitive and functional dentures even more quickly and less complicated - smaller units are also possible on the same day, depending on the local distance between the two partners.

Depending on the type of collaboration desired, three team workflows are available in combination with the corresponding Ceramill DRS Kits. In each case, the central basis of these workflows is the new AG.Live digital platform, which offers both an infrastructure and patient case management at a realizable consistency and efficiency previously unattainable and takes the flow of information and work between the practice and the laboratory to an entirely new level.

Virtual platform AG.Live creates freedom, more efficient processes and greater customer proximity

With AG.Live, Amann Girschbach started the largest digitization offensive in the company's history. This web-based portal for collaboration between laboratories and dentists offers perfect digital services at all levels. To give an example, AG.Live as a central tool for digital case management, a networking, infrastructure and material management, support and knowledge database will gradually replace the previous C3 customer portal.

On the one hand, the platform networks machines and materials in the laboratory, thereby simplifying processes and increasing quality and reproducibility. The biggest advance, however, is providing the link in a growing global network of digitally operating dental professionals. This bridges the interdisciplinary gap between dentists and dental technicians and facilitates future-oriented cooperation. In this network of optimized and new partnerships, the participants can focus on their strengths and better position themselves on the market.

Extending the digital Ceramill CAD/CAM workflow to the dentist

The Ceramill DRS Connection Kit acts as the basic and entry-level variant, with which dentists and laboratories can already take full advantage of digitization. It consists of the intraoral scanner, the Ceramill Map DRS, the associated scan software and the connection to AG.Live. Any order data including all the required information can therefore be shared seamlessly and in real time with the laboratory via AG.Live. This eliminates the need for handwritten job sheets and conventional impressions. All that is necessary is a single physical transport: getting the restoration to the practice for insertion in the patient's mouth, even on the same day in case of simple restorations. This leads to a better dental experience

AMANNGIRRBACH

for the patient and ultimately attracts new patients to the practice and generates more orders for the laboratory.

And if the preferred material is zirconia, the High-Speed Zirconia Kit, consisting of the Zolid DRS high-speed sintering zirconia and a corresponding Ceramill Therm DRS sintering furnace, can optimally support the laboratory here in fabricating straightforward zirconia restorations on the same day.

To provide patients with dentures even quicker in a further step, the system can be expanded in the dental practice with the Ceramill DRS Production Kit at a later stage. This allows simple restorations to be fabricated in the practice and placed in the patient's mouth in a single session.

All Ceramill DRS Kits can be pre-ordered as of immediate in Germany. The High-Speed Zirconia Kit is already available to laboratories. Early bird DRS users benefit from particularly close support from the DRS specialists at Amann Girschbach. Further information and the option of pre-ordering can be found at www.ceramill-drs.com

Online presentation free of charge on the innovative Ceramill DRS

In its online presentation Amann Girschbach explains why it places the dental laboratory at the center of the prosthetic workflow and ensures the highest possible quality and patient satisfaction through close integration and digital exchange with the dentist. Even with the basic version, the Ceramill DRS Connection Kit and the link to the AG.Live digital platform, the practice and laboratory can connect in a unique manner and take full advantage of the benefits of digitization. In addition, information is provided on how to enable interdisciplinary collaboration for restorations in a single session or on the same day in a further step via the possible upgrades with the Ceramill DRS Production Kit as well as the DRS High-Speed Zirconia Kit.

The full presentation is available free of charge at <https://bit.ly/3gocZZM> in various languages.
